General Comment

AI steals from the livelihoods of working Americans and profits off of theft. People who call regulations "burdensome" are trying to avoid consequences for harming others. AI is not what its marketers say it is and it has yet to offer a solution to any real problem that doesn't have better solutions available already. It is expensive and wasteful and not worth investing in to begin with. It should not even be called AI, as it is not an artificial intelligence. It is a computer program that makes probability guesses and gets those wrong most of the time. I oppose the removal of safeguards around AI development. There need to be more safeguards put into place around machine learning and predictive models.
