General Comment

Artificial Intelligence, which is a marketing misnomer for rebranding large language models, image models, and some forms of machine learning, does not work as advertised. Despite repeated and overly optimistic statements, AI cannot produce even marginally consistent results. To use the military term: it fails to meet standards on a consistent basis. Additionally, and equally importantly, AI models are built on stealing the work of actual Americans so that a group of venture capitalists can try to profit off of it. Moreover, the amount of resources - energy, national resources like water, time, and money - that could be better used elsewhere are being diverted to chase this technological fools' gold. When the AI bubble bursts, the US government, meaning the US taxpayer, should not be left holding a bag of rotting, worthless technological feces and be on the hook for paying the tab for all the destruction the attempt to develop AI has caused, is causing, and will cause if this regulation is put into place. The attempt to develop AI, especially using the current developmental and business models, present a clear and present danger to economic well-being and national security of the United States and its citizens. AI needs to be more tightly regulated, if not shut down as the mistaken fever dream of a group of marketeers who want to privatize any potential profits while socializing the risk/damage. This proposed regulation should not be implemented.
