General Comment

AI is still very much too new of a technology to be used responsibly without strong guidelines.

Besides the already noted problems in modern education of students using it to cheat instead of doing the work; modern generative AI must rely on existing material to base what it will generate to a prompt.

Unfortunately, many of those people who are trying to claim this technology is a Net good still believe that their AI models should have unfettered access to copyrighted and protected works without due compensation for the owners.

We do not steal from the farmer who grows our food, we do not steal from the tailor who makes our clothes, we do not steal from the factory worker who makes our goods or the engineer who designs them.

Writers, artists, editors, etc. work hard to develop their talent, and produce human culture that explores who and what we are. No one can doubt such seminal works that serve as modern academic formation and personal exploration. They deserve to be compensated for their time and effort.

AI models trained on these works without compensation is nothing but the worst kind of theft, all to produce material remarkably inferior to actual human talent.

Protect the rights of creators, not venture technologists who cannot be bothered to do the right thing
