General Comment

AI is overhyped, inefficient, ineffective, wasteful, harmful, and unethical. Generative AI in particular does not and cannot do the vast majority of what the companies building it and selling it say it can do, and it consistently costs far more to build and run than it is worth to anyone, even though the AI companies stole and continue to steal the work of millions of people rather than pay fairly for the use of the writing and images they train their models on. Do not throw away what protections artists and writers have to feed the AI beast that is fleecing our society. We should be regulating AI companies more strictly, not less, and hold them accountable for their theft and exploitation of the American people and their employees and contractors around the world. We should require them to pay for the work they have stolen to train their models and stop using work they have not legitimately licensed, pay their data workers fairly and provide adequate psychological support, and require AI companies to power their data centers with renewable energy and ensure they do not deplete water supplies. We should require honesty in advertising - they must stop lying about the capabilities of the technology. We need more and stronger guardrails around the development of AI and its real, tangible harms, not less.
