General Comment

Enabling AI in the way that is being put forward here would make it impossible to put forward creative projects of any kind without submitting to total theft of those creative projects on the basis of, 'AI cannot function without mass plagiarism', which in its current shape it cannot.

This would effectively end any reason for United States copyright law to ever be respected internationally, and set all non-AI-centered industries against AI-centered industries.

This is a great decision if you, for instance, wanted to end U.S. cultural dominance for some reason. But it's a pretty bad decision if you don't want to diminish U.S. cultural authority.
