General Comment

The development of generative artificial intelligence (GAI) is inherently antithetical to the development of equal opportunities among the developing world and within the United States as we see it today. GAI is developed upon the backs of millions of people's labor in fields from medical research to creative writing and the way forward for America has always been through the passion and labor we share in together for the betterment of the society we exist within; destroying copyright law in favor of the staggeringly few billionaires trying to ravenously devour the work of millions of people's work to create an ineffective, laughably inadequate facsimile of the human expression is not where America should be headed or what we should stand to represent. This country deserves better uses of our taxes than the development of this bastardization of humanity. The GAI development and implementation is petering out in the zeitgeist as we see the limitations of this technology coupled with the sunk cost fallacy of the venture capitalist class. They need the government to bail them out for a technology that is obsolete when held in comparison to the human effort of generations before us and the generations of the future. Don't bail the VC class out for their lackluster tech. Don't kill copyright in the US. Save the working class's ownership of their hard-fought earnings. OpenAI and every other LLM does not get ultimate authority over the matter of copyright despite what Sam Altman may whine about. They do not get the right to steal people's work. Save copyright law. Stop AI. No AI bailouts.
