General Comment

Hello, I am a data science student studying AI in school. One of the biggest challenges we are facing today is that AI is growing faster than government can keep up with it. As a result, the industry is largely self-regulated. My public comment is to ask for more oversight, accountability, and transparency for AI models and applications.

These suggestions are taken from the NAACP's brief on AI in predictive policing, but I believe many of these can and should be applied to AI in general:

- **Implement Rigorous Oversight:** Establish independent oversight bodies to review and monitor the use of AI, ensuring algorithms are fair, accurate, and non-discriminatory.
- **Mandate Transparency and Accountability:** Require industries to disclose the use of AI, particularly Generative AI, including the data sources, methodologies, and impact assessments. If Gen AI is drawing off of previous copyrighted/trademarked material, the original creator should be credited and revenue from the Gen AI should be shared with original creators.
- **Promote Community Engagement:** Involve community members in the decision-making process regarding the use of AI in their neighborhoods to build trust and accountability.
- **Ban the Use of Biased Data:** Prohibit the use of data sources known to contain sensitive biases (such as race or gender) unless the data has been cleaned/transformed to be representative of the population as a whole.
- **Establish Legal Frameworks:** Enact legislation to regulate the development, deployment, and evaluation of AI, with strict penalties for violations of civil liberties.
