General Comment

Generative AI is little more than a machine that takes work from artists, mashes it up, and then replicates it in no meaningful way. This work lacks soul and the ability speak to the human condition.

Not only this, but it will be used to take jobs from artists. Consuming copywritten work to create a machine that replicates it to the ends of pushing artists out of industry is unethical and fomenting a disaster.

OpenAI should have to pay all creators of works used in their models and further pay royalties for everything generated since AI cannot create anything if its own volition but only reductive replications therein.
