General Comment

While machine learning is a valuable technological tool that the U.S. should absolutely be pursuing in the furtherance of various fields, LLMs and generative image Ai are a waste of resources, a dead-end ouroboros that serves no ends but the ruination of the information ecosystem that is the internet and the stupefaction of our collective language skills. In addition, they run roughshod over the intellectual property rights of countless writers, musicians, visual artists, and various other creatives.

Any regulatory framework that continues to abet this exploitation is dangerously short-sighted and should be vehemently opposed, and in fact steps should be taken to unwind the damage already done to the work and livelihoods of the innumerable individuals who have had their creations hoovered up by these engines of mediocrity and dreck.

I urge the NSF to bring AI to heel. Thank you for your time and consideration.
