

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-2qsl-11kv
Comments Due: March 15, 2025
Submission Type: Web

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8535

Comment on FR Doc # 2025-02305

Submitter Information

Name: Mom Milph

Address:

General Comment

Parlor tricks and snake oil.

That's what services like OpenAI and ChatGPT that intend to get unfettered, free reign on extracting data from licensed and stolen material is; bullheaded dives forward into fully supporting this approach without considering the laws in place that protect our talent and property will cause hardship unparalleled to the likes of every current terror within our country. And it goes without saying that this indeed will also lead to more unnecessary legal battles and headaches for individuals, companies, and countries alike.

Let alone the fact that where the technology stands right now, it's at best an overvalued commodity that has failed to produce any respectable results for the fields of entertainment and industry. And at worst, has served as a tool for harassment, false information and news. The idea that this will produce better American power is laughable at best when AI is currently dumbing down our children, making our writing lazy, wasting time by constantly being incorrect, and outputting the most garish and uncanny content that's cosplaying as real entertainment.

Unless a leash is properly put on the approaches these AI services have, it will only embolden an apocalypse across the United States of low quality, detestable and incorrect sludge. And as America leads by example, other nations will follow suit as what is a manageable dilution of unnecessary pollution into the entire ecosystem of the internet becomes an unsalvageable wastewater of endless trash.
