Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8539

Comment on FR Doc # 2025-02305

Submitter Information

Name: Mark Maben

General Comment

Generative AI does not have a place in the future of the US, actively harms US production and soft power efforts, is instrumental to the bankrupting of massive swathes of capital already, and is necessarily not self sufficient, profitable, nor effective at almost any task it is put to, that does not immediately become inundated with fallibilities, vulnerabilities, liabilities, and plain old lost money.

It's a speculative bubble long past when the relevant authorities should have stepped in to heavily regulated it, and exact financial repercussions for open, unabashed, and systemic fraud.

The longer generative AI remains as it is, the weaker the US becomes.

The most foolish policy decision from the perspective of any authority concerning national security, not invested financially in AI, would be to legalize further fraud and theft.

This administration must make bold action to restrain this industry, which already is in freefall
