General Comment

To Those Responsible,

The delay and subsequent abolishing of any plans to remove safeguards against A.I. would be the most logical, wise, and innovative approach when it comes to the use and optimization of A.I. Humanity both needs and deserves time to establish a positive and efficient use of A.I. that will preserve our best interests and ability to continue to evolve in profitable ways. Releasing limits on A.I. could result in some extremely detrimental results that could backfire on those who appeal to the unlimited use of A.I. and could seriously hinder mankind's ability to achieve any number of its goals and progress.

It's clear this idea is lacking oversight and thorough thought. A new perspective is imperative and worth considering as soon as possible in order to prevent negative results from arising.

I trust the wisest action in this process is to terminate the plan on to use open A.I. without limitations. Please reconsider your actions to preserve all what's good and profitable both today and in the near future.
