General Comment

I do not believe that generative AI holds a viable future within the United States. It does nothing except steal from hardworking creatives of all fields, depriving them of their livelihoods. This technology is being forced upon our citizens who increasingly do not want it. The use of generative AI attacks meritocracy, its use lends itself to frauds and scams where skills are misrepresented, taking away opportunities from honest workers and creatives. Generative AI cannot be trusted, nor any maker of these generative AI models. How they acquire data isn't just questionable, it is illegal. They have proven time and time again that they violate copyright law by taking property that is not theirs without consent or proper compensation. America should not support a business model that thrives upon rampant theft. America should not support a business model that encourages fraud. America should stand up for its workers and creatives from all fields and reject the encroachment from generative AI companies.
