General Comment

Regarding generative image tools specifically, AI does not learn the way that people learn, is not a person, and cannot be "educated". Moreover, companies like OpenAI are not educational institutions.

The use of the data of private citizens - even when that data is publicly visible - is not protected as fair use for the purpose of training generative AI or large language models. These tools are bad for industry and bad for freelancers in the arts. They steal our intellectual property without consent or compensation, and use it illegally to sell a service that imitates and undercuts our services and businesses by stealing the results of our work. They destroy jobs, they violate IP rights, and allowing them to scrape data without consent is bad for American businesses at every level from the freelancer sole-proprietor to the Disney-Pixar board room.

It is my view that OpenAI and its competitors owe the American people compensation for reproducing, storing, and reselling their data without consent.
