General Comment

Ai is not at all tool that will benefit the American people nor will it enhance any part of our lives. Ai only steals and causes even further disparity between the rich and poor. Ai is unreliable in every context as it does not have accuracy close to that of a human. Cooking, Medical work, The arts, ai is incapable of safely or ethically completing any tasks required for these fields and many others. It is unstable, unreliable, and it damages the world around us. Not just with the harm it causes the environment, but the misinformation it can spread as well. Ai will only take opportunities from real humans and do a worse job while causing even more problems. This is dangerous and puts many people at risk while also robbing them of their livelihood and devaluing the hard work that the American people put into their fields. Nothing about Ai is helpful and it would be not only a disservice to us citizens but it would be a disastrous mistake that may take decades to clean up and we would be the ones suffering because of it.
