General Comment

This obsession with AI has always been so strange to me. It's a soulless machine that gobbles up whatever is fed (willingly given or stolen) to it and &^% out some unremarkable slop. It's disrespectful to the real living, breathing people who hone creative crafts to have their work stolen by this technology. Generative AI has no place in this country, the energy and resources needed to keep it running is such a waste, and it can barely even regurgitate correct information anyway, how could it possibly be helpful in serious decision making, especially if left unchecked with no regulations?
