Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-2wkz-9j35
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8657

Comment on FR Doc # 2025-02305

Submitter Information

Name: Cody Blakeman

General Comment

I question Mr. President's order on a number of fronts.

"Human flourishing" is so broad as to be meaningless, and if AI gets within 50 feet of the arts, then skilled actors and craftspeople will lose jobs to AI simply because the generated result is cheaper, regardless of relative quality. We are seeing this play out in the current SAG-AFTRA video game strike. Having the government push forward AI-generated art/music/voice will only accelerate and embolden those who would diminish or destroy the arts, and reward the best-marketed slop as opposed to human intent, human messaging, and human connection.

"Economic competitiveness" feels equally hollow, as AI has yet to prove itself sufficient in many of the fields it has been pushed for, and if AI were ANY SORT of useful technology, the billions of dollars thrown at the foot of its altar would have borne some sort of fruit in the past two years. Instead, despite having the resources and blessing of many of the world's most influential and powerful people, has yet to do much of anything they advertise it for. If we were to throw half a trillion dollars at microchip production, or farming, or cancer research, or efficient automobiles, how much progress would we have made? And are we able to visualize tangible results from those actions? We don't even know what AI is useful for, but the tech bros who stand to profit from it want to put it in everything, and it would be wrong to sit idle and not question their motives.

"National security" is also hilarious, as we already have some of the world's most sophisticated surveillance technology. AI is extremely unreliable at multiplying 10 by 10, and now they want to solve crimes before they happen? Forget the movie Minority Report, I'm sure it's already come up, but consider when an AI hallucinates a problem and wastes valuable national resources on investigating things that never happened and were never close to happening. If we're talking life-or-death national security, I want tech that's as tested and reliable as NASA. The stakes are just as high.
