General Comment

Any further development of AI in America needs guardrails in place. It is unacceptable to think that we would continue to allow companies to steal the work of countless others in order to train AI models with no regard for copyright laws. The government should not shield these companies from consequences. Surely, if AI is truly the revolutionary technology its creators tout it to be, there is a way to continue its development lawfully and --at the very least-- credit and fairly compensate the original creators of the source materials it is trained on. To do anything otherwise would mean the United States government is openly allowing and encouraging tech billionaires to brazenly commit theft.
