## General Comment

I know I'm small potatoes.

I worked as a citation/bibliography editor for a non-fiction publisher for many years, and I now work in an unrelated field so I have time to pursue writing. I'm an author still trying to get my feet under me, but confident I'll get there soon.

As a member of the independent publishing community, we're already besieged by AI slop from fake cover artists, fake beta readers, fake book reviews—and although it's not much yet, it's getting more prominent—passages of text or even whole “books” from AI “authors” attempting to pass off slop as their own work.

I'm dismayed that our government is attempting to weaken copyright protection. Our entire industry relies on a strong copyright that protects authors and writers and creators of all sizes from the giant Disney corporations down to small potatoes like me. Allowing AI tech to bend the interpretation of “fair use” into theft will irreparably harm the creative field. It will have an actual and real impact on this particular “human flourishing, [her] economic competitiveness, and [her personal] security.” I'm speaking for myself, but I'm one of thousands of independent publishers and authors whose livelihood is already heavily impacted by current AI restrictions for better or for worse, and will only be impacted for the worse if AI tech companies are allowed to steal from the rest of us because they think the game isn't fair because it's not rigged to favor them.

That's to say nothing of the deep ecological impacts that these industries are making.

Generative AI is not ethical.

In my opinion, if AI is to continue, we need:

\*to require absolute transparency when it is used in any capacity—an AI disclaimer published with whatever product they're generating.

\*to require AI tech to absolutely respect existing copyright and compensate the authors of those works (even informally published work online) that are being used to train their models.

\*to prohibit assigning AI-produced work a copyright, because copyright was always meant to financially protect authors and their beneficiaries, not corporations and their stockholders.

\*to compensate the people—that's all of us living, breathing human beings—through heavy taxes on AI tech companies (and crypto!) for the ecological repercussions they're making without penalty.

I know this statement requires editing, which is ironic considering my profession, but we're running on deadline here and I barely saw your notice on social media a few minutes ago. (Please advertise these things more broadly in the future.)

Thank you for considering my remarks.
