General Comment

This is the legalization of intellectual infringement that tens of thousands of digitally active businesses and tens of millions of digitally active Americans do not consent to. Artificial Intelligence-powered generative programs (often referred to as AI-gen programs) are harmful in the sense of offering no credit for individuals or companies whose artworks and properties--be they visual, written, voiced, or coded--and putting them into their databases anyway. Said databases are also phenomenally power-consuming and require constant usage of clean and filtered fresh water. Fresh water that could instead be going to communities and citizens that are in need of it for their daily lives, now being used for processor-cooling of programs that are very highly inept at their intended purposes and almost entirely used for entertainment. The rampant intellectual property theft is heinous on its own, but the environmental repercussions are despicable, and until such a time as the creators and owners of any and all AI-gen programs can adapt them to be far more energy and water efficient AND achieve adequate function through Free Use libraries and public domain properties, there should be no legal protections for these companies and their operations.
