General Comment

All this plan is doing is legalizing theft from the American public, creators, businesses etc all under the guise of "national security". Now matter how you look at it, you have private companies committing theft by using professional works to train their AI models without compensation or even recognition. Those companies in turn profit from it from the US government and/or private companies who utilize their technology. There have already been several high profile cases addressing this concern. Also, there are already laws against using someone else's work in their own creations without proper compensation or acknowledgment/approval from the original creator. I strongly object for the above reasons, which should be more than enough, but there are other reasons that are concerning. Do not move forward with this. It doesn't help the country and it only hurts its citizens.
