General Comment

Generative AI is a plague, other types of AI may have some uses but it should all be regulated and have very necessary requirements to hamper any harm that will come with it. Generative AI steals almost all of its information infringing on artists and writers (or anyone who posts any sort of picture or writing) copyright, privacy, and livelihood. It loses jobs, It's bluff fools bosses into thinking it can do a better job and then creates more hassle for the few people left who are forced to work with it. It creates so much disinformation and is spreading distrust as it's getting harder and harder to tell real images from fake ones. It is frequently wrong and gives people bad information that sounds right so it takes an expert to know the difference and we can't all be experts, people can and do get hurt from this. It's whole purpose is to take many parts of living and interaction away from humans. It is overall a negative for humanity and affects our daily quality of life.
