General Comment

To whom it may concern,

Generative AI and computer learning models are fascinating technologies with multiple applications that could benefit the United States. However, I think the technology should be handled in a safe and ethical manner. To me this means a few things:

- All training data should be owned or licensed by the creators of the learning model. The use of unlicensed data should not be allowed.
- The use of data and works as training data should not be considered under the "fair use" exception to copyright law.
- The use of personal data should always be opt-in, not opt-out. Changes to licenses on websites and software to retroactively attempt to license user's data for use as training data should not be allowed.
- The use of AI outputs without human review in government and business decision making (such as hiring decisions, medical claim rejections, applications for government grants, etc) should be disallowed.

Thank you for considering my response.
