General Comment

AI has huge privacy and plagiarism concerns and I worry about it stealing livelihood from everyday Americans. This technology looks to be a bubble similar to NFTs that can pop at any moment and I worry that it would not be sound economic investment. Additionally, it takes artistic and creative content away from the creators and aggregates them without creating anything original. By training on copyrighted material, it is stealing and plagiarizing the copyright holders and taking away economic opportunities. On the privacy standpoint I worry about its ability to not be hacked or accidentally disseminate confidential material in its generated content. This has large privacy implications for America and American citizens
