Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8750

Comment on FR Doc # 2025-02305

Submitter Information

Name: Derek Sherepita

General Comment

The use of AI or any other machine learning programs or systems should not be used to replace the work of, or employment of, any able American worker. Doing so would only serve to shrink the American work force and create an even more distinct wealth gap.

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

"AI" and other machine learning programs can be great tools to be used in special cases and scenarios. Scientific research and data analysis for predictive models could benefit greatly by use of these programs used as tools. However the intended use for most Artificial Intelligence at the forefront of this discussion are not made to be used in this way. Instead these programs are being used to rob people of their work and livelihood. If we are not careful with where we allow AI to be implemented we will soon see more Americans displaced, unemployed and homeless.

The AI systems made by Big Tech companies like OpenAI (Microsoft) and Google threaten to destroy thousands of American small businesses with their recent demand to create special carve outs in copyright law.

AI systems can only be produced by first training on work made by people. The work of hundreds of thousands of everyday American creators was taken and fed into these AI systems without consent or any compensation. They ingest this work, reassemble it, and then sell it back – directly competing with American individuals and cutting them out of the marketplace.

Now these Big Tech companies are asking this administration to create exceptions and loopholes to make this practice of stealing American creators' copyrighted work legal precedent. They are suggesting that if a machine ingests and reproduces copyrighted work, it is somehow suddenly "fair use".

They seem to believe that anything and everything on the internet – regardless of who owns it – should be theirs for the taking. They claim that if this administration does not allow them to rewrite the law in this way, it will stifle American innovation.

Instead, it will have the opposite effect. The purpose of American copyright law is to protect the incentive to create and innovate.

If we the American people do not own our creations, and everything we put online will be stolen by Big Tech giants, what will be the incentive to create? If everyday Americans create a new innovative piece of computer code, a new visual design, or a new piece of music only to have it immediately stolen by Google and Microsoft, why bother creating it in the first place? How will we possibly make a living doing these things?

Want to protect American innovation? Protect American creators. **Do not create new copyright exemptions that allow Big Tech companies to exploit and steal from creators and everyday Americans without permission, compensation, or transparency.**

This administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair marketplace with competition:

- First, the government should ensure that creators and everyday Americans give effective **consent**, so that we can decide when and where our work is used by AI systems.
- Second, the AI Action Plan should encourage a robust **licensing** marketplace, so that the incentive to create for small businesses is preserved. This work has immense economic value, so the value generated by that work should accrue to the original creators, not just Big Tech.
- Finally, the AI Action Plan should require **transparency** from Big Tech companies, requiring them to disclose what material is in their training datasets, and label what content is AI generated.

I am not anti-technology or anti-AI. I am consistently impressed by the capabilities of these AI systems, and find them incredibly useful for many things. However the use of AI needs to be carefully implemented and monitored.

Thank you for the opportunity to comment on these important issues.
