General Comment

I have no faith in the promise of AI's utility. The livelihoods of creators currently rely on the legal protections that enable their work. The utility of AI, which is worth less than the sum of its parts, cannot eclipse the value of artists because AI is built upon the theft of those artists' work. AI is a cruel means to artificially devaluing the work of an industry while intentionally misunderstanding its purpose; AI's venality hurts the livelihoods of the artists whose work is stolen and, without thought or awareness of the popular discomfort with AI's unattractive handiwork, puts the development of media into the hands of amorphous, venal, and unreliable AI apparatuses. AI is valued only as much as the work of artists is wanted to be supplied without artists' consent, the appropriation of compensation to artists, or so much as acknowledgement of artists. Protection of artists and writers' work is protection of their livelihoods and the reliability of information published everywhere.
