General Comment

I am concerned that failing to preserve and bolster copyright protections for individuals working in and around the arts would be catastrophic. Our most vaunted and well-regarded tech companies have been largely unable to establish a use case for AI without both illicitly training the data on works of artists without their consent and using an enormous and frankly unsustainable amount of energy. Even in the best cases, scientists may be able to use large language models to help them parse large amounts of information, but a dedicated expert is still required to interpret the output of the large language models to ensure that they're not publishing nonsense machine learning. AI only seems to be useful in cases where there are strict guardrails around their output, and those largely do not exist within the arts outside of copyright protections. America's greatest export is its culture, and diminishing protection around the largely decentralized arts workforce would further undercut America's position as a world leader.
