General Comment

Generative Artificial Intelligence should not be given free reign to access copy righted material with impunity. It devalues the labor a diversity of fields of expertise and creativity by marketing itself as a short cut to producing meaningful content. However, because generative A.I. can only function by modeling itself on existing works, it is inherently derivative and sabotages the production of future works. A.I. cannot produce truly original work, and stunts innovation.

I do not think A.I. needs to hold any place of prominence in America's future and to rely on it will only sabotage us. Attempting to strengthen A.I. by giving it the ability to reference any content without restriction is harmful to America's future as an innovator and leader in any field that generative A.I. would be used in as a tool.
