General Comment

Creative Works are owned by the Creators of that work and AI being trained on that work is violation of Copyright at tremendous scale, being tremendously criminal.

If AI companies are to use the creative works of another, in a way that generates profit for themselves, they must follow the Copyright. And profiting off of their work is clearly not "fair use"

AI companies can use all the works in the public domain as there is nothing the government can do to restrict that. The fact that the generated works based on the public domain will be "out of date" is fair and practical and allows "modern" creative works to maintain their legally intended dominance of the market. This is healthy competition that doesn't violate Copyright and uses the Public Domain as intended.

Works generated by a generative AI should not be copyrightable.

* AI scraping of copyrighted works steals from livelihoods of Americans and profits off of theft

* generative AI is overhyped

* generative AI creating profit steals jobs from citizens. generative AI therefore mandates the creation of Universal Basic Income to ensure that citizens are compensated for the destruction of our livelihoods on an enormous scale,
