General Comment

I feel that there should not be any sort of major priority put on developing AI. I feel that it is a way that false information can be generated and spread to sway people to believe and follow information or ideas that are not accurate. There needs to continue to be actual research and fact checking on any information/technology that is going to be presented to the population. I feel that AI will present a lot of false ideals amongst the population that very well could cause unrest and tension as well as give false hope and in a sense spread lies. The reason for this is that the people that are trying to develop AI for their individual reasons will easily be able to make things look or seem the way that they feel regardless of the outcome.
