Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8820

Comment on FR Doc # 2025-02305

Submitter Information

Name: David Musto

General Comment

Allowing carve outs in copyright law for Big Tech companies will only encourage them to harvest more work from hardworking Americans without consent or compensation, entirely to line their own pockets.

These AI companies are largely unprofitable even as they steal thousands of Americans' work, and have not provided a genuinely widespread and tested use-case for their products. This is an attempt to keep them afloat as the AI tech bubble begins to burst.

Translator

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am an everyday American who works as a media and entertainment Japanese to English translator. I have been in this industry for almost a decade, and a professional translator for even longer, and I have seen for myself what rampant usage of AI systems will do to hardworking Americans.

AI systems have been a standard in translation for a decade, and though they have their benefits, they have largely been used to devalue language expertise and translation skill to pursue low costs and high profits at the expense of the translator. Media and entertainment industries in particular are being infested with poorly translated and produced AI editions that make it harder and harder to turn translation into a career.

I outline this niche example from my own situation to illustrate a case study in what will happen if Big Tech companies are given special carve outs and loopholes in copyright laws to allow them to train their AI systems on the work of thousands of creators without consent or compensation. These AI systems ingest our work, reassemble it, and then sell it back to our clients – directly competing with us and cutting us out of the marketplace.

If we the American people do not own our creations, and everything we put online will be stolen by Big Tech giants, what will be the incentive to create? If everyday Americans create a new innovative piece of computer code, a new visual design, or a new piece of music only to have it immediately stolen by Google and Microsoft, why bother creating it in the first place? How will we possibly make a living doing these things?

Want to protect American innovation? Protect American creators. Do not create new copyright exemptions that allow Big Tech companies to exploit and steal from creators and everyday Americans without permission, compensation, or transparency.

Thank you for the opportunity to comment on these important issues.
