Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8827

Comment on FR Doc # 2025-02305

Submitter Information

Name: Evan Simko-Bednarski

Email: [REDACTED]

General Comment

Hello. I am a writer, a journalist and a photographer, and have made my living as such for more than a dozen years. If I were to steal someone else's work and incorporate it into my own with no acknowledgement, I'd be guilty of plagiarism and -- depending on what I stole -- copyright violation.

Yet the folks hocking so-called "artificial intelligence" are doing just that -- taking work like mine, putting it into an overleveraged calculator, and calling the result something new.

This would be problematic enough if these programs were actually doing something useful. But their tendency to hallucinate, to give incorrect information, is dangerous -- especially as they are marketed as supposed "intelligence." Add to that the massive energy requirements and monetary investments necessitated by supposed "AI" development, and the need for serious regulation is crystal clear.

"AI" should not be subsidized by government in any way, and serious regulations should be put into place governing any use of the technology in transportation, healthcare, education, the legal profession, or any place where decisions can impact life or death.

Furthermore, the use of any copyrighted material for the development of supposed "AI" should require a licensing agreement with the copyright holder.
