As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-343s-33kb
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8833

Comment on FR Doc # 2025-02305

Submitter Information

Name: Game Developer

Email: [REDACTED]

General Comment

I don't want AI to have any place in the US's present or future, especially not under the thin and entirely fabricated justification of "national security". "AI" is an enormously wasteful, expensive, unethical, unproductive, and unwanted scam fueled almost entirely by the blatant, brazen, theft of data spanning all industries, academia, research, and the arts. It is just another attempt by the morally bankrupt Rumpelstiltskins in Silicon Valley to attempt to spin straw into gold, having successfully enshittified the entire internet and most aspects of modern life thru "innovation" in their soul-destroying quest to extract infinite profits from ordinary citizens.

OpenAI, LLMs, and other generative "AI" models have had years of unchecked access to the totality of human knowledge and expression, and have yet to produce a meaningful justification for their continued over-valuation and existence. Industries have been decimated, and thousands (possibly millions) of skilled workers have been laid off because gormless C-Suite types bought into empty promises from the likes of Sam Altman and his astoundingly credulous army of zealous sycophants. What do they have to show for it: lying chat bots; psychedelic photos of Jesus Christ made out of shrimp; hideous sludge passed off as "art"; deep-fake pornography of countless victims without their consent; "automatic" self-checkouts in un-manned stores that in actuality are remotely monitored by hundreds of low-wage workers in developing countries; the hasty firing of thousands of federal employees (some of whom were later re-hired) based on the non-expert supervision of an un-specialized AI; not to mention the fact that AI suggestions, summaries, bad data, fake news, fake articles, fake media, and other so-called "hallucinations" have polluted the internet to the point where looking up basic facts is a challenge for anyone not savvy enough to know where to look, and entire industries will be formed solely to separate this junk data from the genuine. All this for the low, low price of half a trillion dollars and more electricity and fresh water than could sustain an industrialized continent for decades.

The reason these companies are trying to convince our government that their technology is important to national security is because they know it will be easy lie to sell to many Americans and their representatives. Their calculation is simple: if they can convince enough taxpayers of AI's usefulness, they can receive infinite funding from American taxpayers and never have to worry about being held accountable for their lies, fraud, nor the unfathomable amount of data they've stolen to enrich themselves. Do not let them get away with this attempted scam.
