General Comment

As I'm sure there has already been an abundance of comments pointing out how allowing generative AI companies effectively makes a mockery of copyright law and the working artists that those laws were meant to protect, I won't reiterate them here. I doubt they'll be listened to.

However I also want to comment; Generative AI has already, and will continue to, erode trust in government institutions. If GenAI companies are allowed to openly flout the law and steal from the average citizen in service of a machine seemingly purpose-built to churn out mass disinformation, why would anyone continue to trust the government has their interests and well-being as a priority? Further, this disinformation machine could be used to stoke increasingly severe actions, such as hate crimes, mass shootings, or even acts of terror.

We're already seeing massive rises in infectious disease due to disinformation leading people to believe vaccines are ineffective and dangerous, what happens when Generative AI is used to simulate a public address from a politician that encourages criminal acts?

This is technology that has already proven harmful. There's no stuffing that toothpaste back in the tube, but regulation could prevent a bigger mess from being formed, and I am of the opinion that GenAI companies cannot be trusted to do so.
