General Comment

Allowing OpenAI to train on copyrighted content without permission devalues the work of corporations, creatives, and, studios who rely on licensing and ownership for their livelihoods and continued creation. As it stands they exploit artists, dilute future originality, and undermine industries that depend on intellectual property protections. The technology still remains unprofitable and has done largely nothing except damage the reputation of companies to their consumer bases. If AI companies can freely scrape and monetize copyrighted work, it sets a dangerous precedent where any property a company owns is a target to use, abuse, and dilute with a soulless copy of to the point where all product loses any sense of value.
