General Comment

I don't think that the USFG should do anything to help AI corporations in the US. They don't provide anywhere near useful work for the vast amounts of resources they consume. The amount of power, water, and hi tech chips are being used to make a machine that can spout confident sounding words back at you. Over the past few years they've had plenty of time to show that they can make a product that people want, but they haven't. This is throwing money into a bubble that is going to pop. And if they ever did work, its by stealing from the American people to enrich monopolists. There's no way that AI companies should get special rules to break the law the rest of us have to follow. You can't make an AI small business. Its a bad deal.
