General Comment

“Generative AI” is an overhyped dead-end of a technology that steals from my livelihood as an American and profits off of theft. If your business can’t function without stealing from the American public, you don’t have a business. You have an illegal operation begging the government to allow it to steal. If OpenAI and other AI companies can make money by stealing copyrighted material, why can’t I? Where’s my right to break the law?

Add to this the fact that there is no proof that AI will ever reach the magical heights that companies like OpenAI promise are around the corner — seemingly just a bit further around the corner year by year. In fact, exponentially increasing costs and amounts of data are leading to diminishing returns in the improvement of this technology and any sort of usable results. There is no gold at the end of the rainbow. It’s a scam.

Generative AI has no place in America’s future. It will be abandoned as an overhyped dead-end technology within a few years, and its purveyors are lying to the American public. Do not give these companies permission to scam the American people.
