General Comment

I am a creative and professional writer who works in healthcare. I disapprove of “generative AI” technologies stealing and profiting from my work without compensating me. Generative AI takes my words and regurgitates them, often sharing incorrect information and directly harming innocent people with their misinformation. In addition this directly harms creatives and professionals such as myself who authentically create our own work. There must be guardrails in place to protect the work and wellbeing of human writers and compensating us for our time and expertise. The current iteration of Generative AI that exists without respecting the work of the creators they depend on is immoral and it should be illegal. The government should be protecting us and not the harmful generative AI technology that steals our work from us.

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

However, I do not give permission to enter this into a generative AI database or program.
