General Comment

Hello,

AI development should not be supported at the expense of copyright. Copyright laws exist to protect intellectual properties of all types. If AI is allowed to bypass these laws, who's to say these laws actually mean anything? This will be a slippery slope to additional industries lobbying to destroy copyright laws.

I am an artist, and I enjoy drawing art as gifts for people. I enjoy writing short stories for people. If AI is going to be allowed to use my art in its collections regardless of my feelings, I would rather not draw or write at all.

AI is grossly unethical, as it is incredibly detrimental to the health of the environment, and it is often supported by cheap outsourced labor in third world countries. People who are paid pennies for hours of work is not "artificial intelligence," it is effectively slavery.

Studies have also shown students who rely on AI technologies to support their scholastic studies retain less information and skills than those who don't. Is this what we want as a country? If the whole purpose of funding AI development is to further America, then it has failed at step one.

The hype for AI is both temporary, and too costly both monetarily and in material worth regarding the environment. It would be better to take all the funds directed towards AI and instead funnel them towards education to ensure future generations can build a better future.

Thank you,
