AI Statement

I am an American who works in the design and arts field. I have worked to develop my skills and knowledge for years and to have that threatened to be taken away by Big Tech companies like OpenAI (Microsoft) and Google is absolutely unacceptable!

These generative AI companies seek to exploit and destroy small and large businesses, and with their recent demand to gut copyright laws in the United States, this will send a ripple effect through creative markets and fields that will hinder not help them.

Generative AI systems can only produce what is first trained on by real humans. Hundreds of thousands of Americans have already been exploited in the name of Big Tech, without consent or compensation, and this cannot be the precedent set going forward for the everyman.

In making it commonplace practice to steal creators' copyrighted work, this sets a dire state for the future where a person is valued less over a machine. Is this what we want America to become?

The internet has already been flooded with deepfakes and other harmful ai produced content and if we continue down this path and this administration caves to Big Tech then it will 100% stifle human innovation and growth. This is not fair to creators and above all else, it is not right in general.

The purpose of American copyright laws is to protect. In taking this away, we are taking a major step backwards that will just harm our nation in the long run and further weaken the state of its people.

Protect American creators, please do not let Big Tech companies further exploit and steal from everyday American creators. This administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair marketplace with competition.

What we need, instead of being exploited by billionaires who do not represent the common interests of most American citizens, is for people to be able to give consent before their work is used by AI systems.

This administration's AI Action Plan should encourage robust licensing in order to incentivize creative businesses, big or small, to continue to persevere and retain value generated by the original creators, not just Big Tech.

Lastly, this administration's AI Action Plan should require transparency from generative AI companies and Big Tech, to disclose what material they are training their datasets are on and the ability to label what is AI generated content.

I am not anti-progression or anti-technology. I believe that technology is capable for incredibly useful things. This is not one such instance. We should not sacrifice the hard work of hundreds

of thousands of Americans in the name of giving it away to Big Tech companies and rewriting copyright law.

Thank you for the opportunity to comment on these important issues.
