General Comment

I am strongly against this proposed AI Action Plan.

When we seek information out, we also have to question the sources of where it came from. AI has been notoriously bad at mangling facts when looking up data. For example, I work in customer service at a place where people sometimes search for pricing information on Google's AI search, and it gives them outdated and misleading information from other places on the internet, rather than the up to date information on the website.

Plus all this information and media was created by people, how will the contributions of these people be compensated? Or credited? There is a massive chunk of the workforce ranging from artists to STEM positions that could not only be put out of work, but without their credits what could they even show they accomplished? They wouldn't even be able to put these things on their resume.

When trying to argue your stance on something, it helps to be able to back up that claim with evidence and credibility. The abuse of data for the rampant use of AI that would come from this order would remove that completely and be devastating for the economy and the people of this nation.
