As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-37fa-67hy
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8901

Comment on FR Doc # 2025-02305

Submitter Information

Name: Anonymous Anonymous

General Comment

I am a computational physicist who has used machine learning in my professional career for many years. Machine learning, which covers everything from hidden Markov models to multilayer perceptrons to today's large language models, has been a very useful tool for pattern recognition and especially for processing and interpolating large, multidimensional datasets.

However, there is no reasonable interpretation of the law that should allow the storage and usage of copyrighted material for "training" models referred to as "artificial intelligence." The propensity of such models to "memorize" their training data is sufficient to determine that "training" cannot be considered fair use.

Companies must not be allowed to use illegally downloaded, stored, and processed data in their machine learning models for profit. This would have severe and negative consequences for copyright holders whose data has been stolen and for companies that have paid copyright holders for appropriate licenses to do so.
