As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-37ow-pm2e
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8909

Comment on FR Doc # 2025-02305

Submitter Information

Name: Anthony Lilienthal

Email: [REDACTED]

General Comment

I would like to protest the deregulation and the 'removal of guard rails' in the development of AI. We speak of national security, yet removes an individual's ability to fight to have their information removed from AI training databases. We need these guardrails, especially in the absence of government or third party oversight. Others will speak to the integrity of artists (which I agree with wholeheartedly); however, let me approach this from a different angle.

Recent events have illustrated that we NEED tighter regulation on AI, ones shore up the trust in the data we find from our news and information sources. This is NOT an argument that 'we are on a slippery slope', that if we do not stop it now, we will have no ability to stop it later. ALREADY TODAY, we are seeing examples of slander and dehumanization when bad actors use freely available AI tools. We have seen improvements in deepfakes and faked videos (a couple examples include the president kissing Elon Musk's feet and the stolen likenesses of celebrities/business owners in compromising and sometimes pornographic content). These are only a couple of the issues we've already seen, and AI is only continuing to improve each day. Thankfully, many of our current examples have been easy to detect due to their flagrancy; however, as AI use continues to grow, its ability to alter video, visual, written, and listening media will only become harder to detect. We NEED a way to police this. The government is a beast to direct, and thus it cannot contend with the rapidly growing space of AI. As legislature is developed to regulate the industry, we must empower the people to regulate it for themselves, to hold the AI industry accountable for the works it uses and the information it presents. This includes the ability to take legal action and/or to remove an individual's information (personal, statistical, legal, artistic, etc) from AI training databases. Do NOT "remove the guardrails" of the AI industry. Make sure these industries are held to task and made to work for Americans; not in spite of Americans.
