General Comment

I dont usually do this sort of thing, but on this I felt I had to speak up. AI companies do not deserve special exemption from laws merely because AI is new and innovative. Already the hype behind it has started slowing down. Within a year or two, it'll be remembered as a passing fad. Certainly ly there may be minor integrations of it into some products and services, but it will not be a fulcrum on which the world turns. 90% of current recent AI applications are solutions in search of a problem, scrambling to srptring together enough buzz words to justify their own existence. New does not justify special exemptions to the law. If a company wants to develop an AI, they must do so legally and ethically. Human creativity and creative sovereignty cannot be trampled for the sake of making a machine which specializes in optimizing the trampling process.
