General Comment

The hardware and infrastructure costs alone ensure that LLMs can not be truly profitable. They are demonstrably worse and more expensive than the "problems" they claim to solve, and quite frankly, their proponents are only trying to find someone else to leave holding the bag.

LLMs/"AI" are most definitely not worth giving unrestricted access to copyrighted material to "train" on. It won't even lower costs, as more "training" means more expensive hardware is required, which means more energy use and overall waste. Any material produced by an LLM will also be unable to receive copyright protections in other large markets, further limiting its money-making potential.

Please, do not weaken copyright protections in the name of this get-rich-quick scheme. If for no other reason than that everyone who could conceivably have gotten rich quick from "AI" has already done it.
