Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8955
Comment on FR Doc # 2025-02305

Submitter Information

Name: Abraham Marsen
Address: United States,
Email: [REDACTED]

General Comment

Generative content engines, currently improperly classified as "artificial intelligence" such as ChatGPT are a danger to United States Citizens on several levels.

The data harvested is a privacy violation the likes of which we have never seen before, reaping personal or insecure data without any discernment. This can expose banking/government information, personal diaries, passwords, and more if the engine is quired in the correct way.

It has been shown to harvest anything, including illegal material like CSAM (<https://arstechnica.com/tech-policy/2024/08/nonprofit-scrubs-illegal-content-from-controversial-ai-training-dataset/>) or be capable of creation of it. This further extends to the creation of revenge pornography where a user can create false chat logs, images, and more graphically depicting anyone in any act.

Evidence-based law will be increasingly harder to prove beyond a doubt when defense can access tools to reliable create false alibis that withstand basic scrutiny.

Scams using "Artificial intelligence" are on the rise, where voice captures, false images, videos are all produced with relative ease and high believability.

All of this is before even considering the mass damage it incurs upon those in creative fields. Any business or person who is not currently already at the top and able to pay OpenAI and its competitors to keep their content out of content engines or safeguard it will have their own creations plundered, plucked apart, and recobbled into things that only promote monopolies and stifle creative work.

We are also seeing corporate in-house usage leading to mass firings across many industries and various levels of unemployment are rising. We are even seeing instances where some groups are allowing the "artificial intelligence" to make decisions, which could lead to legal situations where there is no 'person' to take responsibility for an action that has caused great harm.

Please. Do not allow "artificial intelligence" a pass. Please do not allow generated content to create chaos that cannot be undone. It will cause harm. It will costs lives. It will and is creating suffering and loss.
