General Comment

AS a lawyer, I face the increasing problem that many of the applications and services I am using are automatically uploading the words I write to train various AIs. This is a huge problem. Not only is it a copyright violation, but the risk of divulging privileged, confidential, and highly sensitive information from my clients is real. There are many examples of AI tools spitting out privileged information to their users out there.

Every application and service needs an easy way to turn off the program's ability to upload the user's information to train AIs so that confidential, privileged, and sensitive information is not uploaded to the AI and then given (without the original user's knowledge or consent) to future users.

Knowing this, I have an ethical duty to never use a tool that might upload my or my client's text to train an AI.

Please make sure that every program has an easy to find "opt out" that stops the tool from uploading user data to train an AI.
