General Comment

Generative AI has no practical application in Americans' lives in its current state. Its lack of regulation means that it is effectively theft from creatives and is therefore robbing American creatives of their jobs. The information it outputs is unreliable and frequently wrong, so it is inapplicable in schools, data entry, or any field where data accuracy is important. There seems to be no plan to address server and power costs when we are already in an energy crisis. I believe this will be a case of offloading the cost of a useless toy onto American taxpayers and therefore do not support this bill in any way.
