Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8961

Comment on FR Doc # 2025-02305

Submitter Information

Name: Bailey Hobbs

General Comment

Artificial intelligence needs to be regulated in every way, from how it is developed to how it is deployed. Ai needs to be restricted on how it is trained, especially generative ai, and restricted to only people who have consented to having their works used in this detrimental manner. As someone who makes their living off of their art, I do not want my livelihood fed into a machine for anyone to use and make artwork that looks like mine but isn't. As for deployment, The ultra-wealthy are using generative ai's in ways that are pushing artists out of their jobs. This is of massive concern to me as it is only a matter of time until this "technology" makes it over to my artistic field.

The security of these "systems" is also very concerning as I know that they are also used in situations that handle very sensitive information, and I know that these systems are easily hacked from all directions, especially from the inside by the user, prompting it using chains of questions that ultimately allow the user to bypass internal blocks and get answers that they want. I also know thanks to the news, that these systems are also easy to hack into from the outside by hackers.
