## General Comment

If this was really a matter of national security, the military could nationalize generative AI development rather than leave it as a commercial enterprise (that happens to be ravaging huge swaths of American industry). As a non-commercial government project, generative AI would have access to all the training data it needed. The fact that this is not even being proposed gives the lie to the stated rationale for these changes. There is no reason to exempt tech companies from the laws that bind the rest of us.
